

Feathered Mask

Instructions:

1. On cardboard, draw the mask shape using the pattern and then cut it out.
2. Cut out two holes for the eyes.
3. On construction paper, draw the beak shape using the pattern and then cut it out.
4. Fold the beak along the dotted lines. Attach the beak to the eye mask by gluing or taping the two flaps to the mask.
5. On each side of the mask, just above your child's ear, punch a small hole. String an 8-inch piece of elastic through the small holes. Pull the string so that it holds the mask against your child's face. Tie off both ends.
5. Glue on feathers to cover the mask.
